MORAN
TECHNOLOGY CONSULTING

Data & Analytics Services

Moran Technology Consulting is a highly experienced and proven provider of management and technical consulting services to the higher education industry. We combine a detailed understanding of higher education processes, organization culture, and Higher Education Information Technologies, with years of hands-on data and analytics implementation experience to support our clients' objectives.

Institutions have amassed large amounts of data via legacy processes and technologies. Often these were deployed to address a specific need and do not all work together logically to allow clients to derive the most value out of their data. We work with clients to assess their current data landscape across people, processes and technologies in order to provide a strategic roadmap to arrive at a point where accurate data is available to the proper people to drive competitive insights and can be used for institutional decision making.

In addition to strategic assessments, we support clients in their Data Governance journey. Many organizations have struggled to implement long lasting data governance initiatives due to a variety of reasons. Data Governance is a cultural and institutional change required to educate stakeholders on the importance of properly managing data and empowering them with the processes and tools to do so moving forward. We work with clients to understand your current state and define a step-by-step approach to rollout Data Governance.

Helping transform the **higher education** *community*

What We Do
